

Director ABL-PRODUCTION DOO and all employees, as part of their professional activities, are committed to the continuous improvement of quality management in accordance with the requirements of the ISO 9001:2015 standard, with the aim of meeting the expectations of customers and all interested parties. Special attention is given to fulfilling customer requirements and expectations regarding the quality, price, and delivery deadlines of our products and services.

This Policy provides a framework for establishing and achieving general and measurable objectives. The top management and all employees of the company are responsible for its consistent implementation.

Our vision is to strengthen close partnerships with affiliated legal entities and maintain good business practices, in order to retain our leadership position in the development, production, and sale of power modules, cables and cable management, monitor holders, and CPU holders in the United Kingdom. Simultaneously, we aim to use our competitive and qualitative advantage to expand our market position in the EMEA region.

To achieve this, we have decided to:

- Maintain and continuously improve the Quality Management System in line with the requirements of ISO 9001:2015;
- Plan general and measurable objectives, monitor, analyse, and review the Quality Policy and the results achieved, and make decisions based on facts;
- Consistently comply with relevant laws, regulations, standards, and contractual obligations with internal and external parties;
- Build and nurture partnerships with our customers, suppliers, and other interested parties;
- Through systematic, professional, and analytical work in all areas of our business, strive for continuous improvement of the quality of processes, organisation, products, and services as part of an ongoing effort to fully meet the needs and expectations of our customers;
- Foster the principles of leadership, teamwork, respect, communication, and the involvement of all employees in the achievement of planned objectives;
- Identify and carefully analyse all factors that may impact the environment and implement pollution prevention measures at an early stage of process development;
- Identify and carefully analyse all factors that may impact occupational health and

safety and implement injury prevention measures at an early stage of process development;

➤ Ensure the transparency.
